

How many legs does
an elephant have?

Do you see a young
lady or old lady?

Is it a rabbit
or is it a duck?

Two spokes or three spokes?

Welcome to Psychology!

A Level Psychology is . . .

- A look at a range of classic and contemporary research studies that psychologists have conducted.

- An opportunity to do your own research and learn about how to do psychological research.

- A chance to look at the impact of the world around us, the criminal mind and psychological disorders.

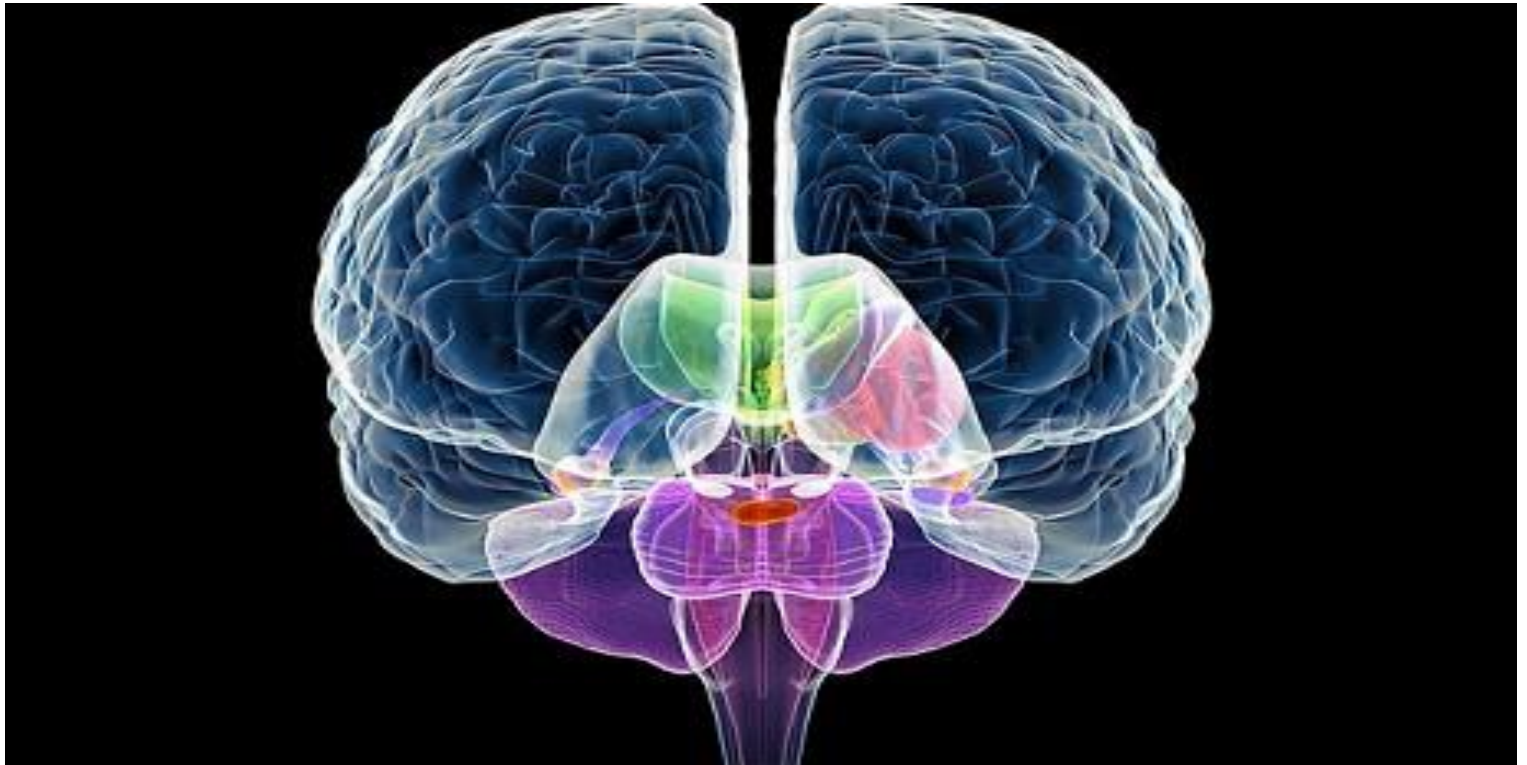

A Level Psychology asks . . .

- How do other people influence our behaviour?

A Level Psychology asks . . .

- How does our biology affect our behaviour?

A Level Psychology asks . . .

- How does our mind process information?

A Level Psychology asks . . .

- How are we affected by our upbringing and childhood experiences?

Psychology is a good choice as. . .

- it combines well with arts, humanities and science subjects.

- it covers a range of research, statistical and essay writing skills.

- all careers involve working with people.

- it's a chance to do something new and be successful.
